### **SpeediCath® Flex and Luja® catheters in Germany / information to customers**

Martin Sick Nielsen  
Vice President, Group IP

SpeediCath Flex and Luja catheters are both part of Coloplast's sterile, ready to use ranges of coated catheters intended to be inserted into the urethra to reach the bladder allowing urine to drain.

From October 2024, Coloplast is implementing a minor change to the surface of the 'raw' catheter material of these catheters prior to coating. The change will have no impact on the handling, the overall performance and the basics and quality of the coated catheter.

The change follows from litigation against Coloplast relating to a patent.

By updating our specifications, we ensure that the surface properties of our catheters consistently are outside the scope of protection of the patent, and furthermore, it ensures a consistent specification of the surface properties of our 'raw' catheters across the portfolio.

Your sincerely,

Martin Sick Nielsen

Coloplast A/S
